

# GAME DEVELOPER

## Your Passion

You'll need a passion for games, technical skills and the ability to work on your own and with a team to succeed as a games developer

## FACT

More people watch & play online video games than major cable networks and subscription entertainment services

## Your Mission

You'll be involved in the creation, coding and programming of games for personal computers, games consoles, social/online games, arcade games, tablets, mobile phones and other handheld devices. Other potential areas of work for a game developer include audio, design, production and visual arts.

## Qualifications

- A degree in software engineering, computer science or a related field
- Proficiency in programming languages, such as java or C++ and C#
- Experience with a video game engine such as Unity 3D

## Knowledge & Skills

- Team work and communications skills to cooperate with the team
- Self-motivation and the ability to work independently on your own projects
- A creative and innovative approach to solving complex technical problems
- Organisational skills to manage and prioritise your workload effectively
- Enthusiasm for gaming and familiarity with a range of programming language
